

Don't Muck It Up - Presentation Option List

The presentation piece of this Lab Practicum needs to creatively display your procedures and results of lab testing over the course of the past two weeks. You must show how you set up and carried each type of test as well as what results you obtained. Your explanations can be a part of the presentation itself or you can verbally explain in addition to the presentation. Be creative and have fun with your choice! If you find a way to incorporate additional items that are not required to be within the presentation piece (ie: electron configurations, Lewis dot structures, reactions, etc.) more power to you :). You will find a list of options below, however this is not a comprehensive list and you may decide on something not mentioned.

PowerPoint (Google Slides)

Presi

Video (Commercial, PSA, talk show, etc. format)
